

42. A system comprising a mobile apparatus and a positioning infrastructure, wherein at least one of the mobile apparatus and a stationary apparatus of the positioning infrastructure is an apparatus according to claim **32**.

43. A computer program code causing an apparatus to perform the actions of the method of claim **25** when executed by a processor.

44. A computer readable storage medium in which computer program code is stored, the computer program code causing an apparatus to perform the following when executed by a processor:

monitoring at least one criterion for an adjustment of a frequency of a periodic transmission of information by a mobile apparatus via an air interface, the periodic transmission enabling a determination of positions of the mobile apparatus; and

when it is detected that the at least one criterion is met, causing an adjustment of the frequency.
